

**Can you be a community scientist and look for these moorland animals?**

**Brown hare**

**Red grouse**

**Adder**

**Common lizard**

**Green hairstreak butterfly**

**Redwing**

**Orange tip butterfly**

**Peacock butterfly**

**Curlew**

**Swallow**

**Mountain hare**

**Common toad**

**Rabbit**

**Ring ouzel**

We're asking people to look out for these animals so that we can find out where they are, when they are about and how many there are.

**Now that you've found all the animals in this treasure hunt, take away some postcards and look for these animals in real life.**

When you see one of the animals, write on the postcard where they were, the date and how many you saw. Then put the card in a post-box. You don't even have to pay for a stamp, it's free to post!

You could also enter your wildlife sightings on our website:

<http://www.moorsforthefuture.org.uk/community-science>

Why not download our free 'MoorWILD' android and iPhone app to help you identify moorland animals. You can record your sightings of the animals using your device's GPS.

More to do:

1) Can you group the animals into the following categories:

Birds (write b) Mammals (write m) Reptiles (write r) Insects (write i)  
Amphibians (write a)

2) The mountain hare lives high up in the hills and mountains. It turns white in the winter and then back to brown in the summer. Why do you think this is?

3) Two of these animals migrate to warmer places in winter, returning to the Peak District in the summer to breed. Do you know which ones?

Another one goes off to the seaside for winter, but comes back to the hills to breed in summer. Which one do you think it is?

One leaves the UK in spring to breed in Scandinavia. Which is it?
